

Maintenance Reference Guide

Tique-Maintenance

Basic Cleaning

The use of a mild cleaning solution (never use acid cleaners) followed by low pressure water rinse. Tique Wall Systems recommends the use of a General Purpose Cleaner available through a Tique Wall Systems distribution location. General Purpose Cleaner is a dry mix designed to be dissolved in water and spray applied to the Tique Wall Systems finish surface.

If spot cleaning is needed, mix a small amount of General Purpose Cleaner and apply to the soiled area with a soft bristle brush. After cleaning, rinse thoroughly with a light water wash. This solution will remove dirt and pollutants from the wall surface.

Organic Stains

Currently, there are no products available that have the ability to remove organic stains. Insect nests or hives should be removed and the stained areas must be chipped away until the affected area is eliminated. The area can then be base coated and re-finished.

NOTE: If any areas need to be re-surfaced, the final process can be a rolled on application of Tique Wall Systems Top Coat over the entire area in order to achieve a uniform color.

Solvent Based Stains

Stains such as tar and asphalt must be chipped away until the stain has been removed. The area must be basecoated and a new application of finish must be applied.

Note: It is recommended to test any cleaning solutions in a small hidden area prior to any full scale cleaning processes. Consult your Tique Wall Systems representative for further information.
